Ideation Phase
Define the Problem Statements

Date	15 February 2026
Team ID	LTVIP2026TMIDS66420
Project Name	Optimizing user, group and role management with access control and workflows
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Problem Background

Modern organizations manage thousands of users across multiple systems. Traditional manual user and permission management leads to:

- Security vulnerabilities
- Human errors
- Delayed access provisioning
- Poor audit compliance
- Difficulty in scaling

Problem Statement

Organizations face significant challenges in efficiently managing users, groups, and roles across systems. Existing solutions often lack automation, centralized control, and proper workflow mechanisms, resulting in security risks, administrative overhead, and inefficient access governance.

Therefore, there is a need to design and implement an optimized system that:

- Automates user lifecycle management
- Provides robust role-based access control
- Enables workflow-driven approvals
- Ensures auditability and compliance
- Improves scalability and security
