Project Design Phase
Problem – Solution Fit Template

Date	15 February 2026
Team ID	LTVIP2026TMIDS66420
Project Name	Optimizing user, group and role management with access control and workflows
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The problem–solution fit analysis validates whether the proposed system features directly solve the real challenges faced by stakeholders. It ensures that development efforts are aligned with actual organizational pain points rather than assumptions.

Problem Overview
Organizations often struggle with manual and fragmented user access management processes. Administrators face difficulties in maintaining consistent permissions across systems, approval processes are slow and error-prone, and audit readiness is weak due to poor visibility. These issues increase security risks and operational overhead.

Target Users
The primary users of the solution include system administrators, IT security teams, managers/approvers, and organizational end users who require timely and secure access to resources.

Core Problems Identified

- Manual user provisioning consumes time and introduces errors
- Lack of centralized control over users, groups, and roles
- Delayed access approvals due to manual workflows
- Difficulty in tracking and auditing user activities
- Risk of unauthorized or excessive access privileges
- Poor scalability with growing organizational size

Proposed Solution

The proposed system introduces a centralized access management platform that integrates Role-Based Access Control (RBAC) with automated workflow processing. The solution provides structured user lifecycle management, group-based permission inheritance, and intelligent approval routing to reduce manual intervention. A comprehensive audit logging mechanism ensures full visibility into system activities, supporting compliance and security monitoring.

Template:

Problem–Solution Fit Template

The problem-solution fit validates that the proposed system features align with real challenges faced by stakeholders. This ensures development addresses critical user needs.

Problem Overview

- Manual and fragmented access management
- Slow and error-prone approvals
- Poor visibility and compliance tracking

Target Users

- System Admins
- IT Security
- Managers

System

- System Admins
- IT Security
- End Users

Proposed Solution

- Centralized access platform
- Role-Based Access Control (RBAC)
- Automated approval workflows
- Detailed audit logging
- Secure authentication & authorization

Problem–Solution Mapping

Identified Problem	Proposed System Feature	Expected Benefit
Manual permission errors	Role-Based Access Control	Consistent and accurate access assignment
Slow approval process	Automated workflow engine	Faster access provisioning
Lack of visibility	Centralized dashboard	Improved monitoring and control
Audit difficuities	Detailed audit logging	Easier compliance and tracking
Scalability issues	Group-based permission model	Efficient large-scale management
Security risks	Secure authentication &	Reduced unauthorized access

Fit Validation

- Proposed system aligns with stakeholders- needs, validating problem-solution fit.

Fit Validation

- Proposed system aligns with stakeholders needs, validating problem-solution fit.

Value Proposition

A centralized system that automates user access management, ensuring enhanced security, faster approvals, and reduced administrative workload.
